Asia's first homeland security exhibition and conference, Global Security Asia, was a key event for ST Engineering.

Held in March, the three-day exhibition drew 150 exhibitors from 12 nations and presented an ideal platform for the Group to share and showcase its array of homeland security solutions.

Presenting technologies in the areas of Comprehensive Awareness, Protective Actions and Response Management, ST Engineering's highlights included unmanned aerial vehicles and surface vessels, blast mitigation polymers, integrated emergency and security communication platforms.

The star of the show was the miniV, the world's smallest VSAT (very small aperture terminal) for satellite communications, which was unveiled by Singapore's Minister for Home Affairs, Mr Wong Kan Seng, at the show's official opening.
