

Compact Personal Weapon

Compact Personal Weapon

- Compact – can be easily concealed or holstered
- Lightweight
- Superior performance with 7" barrel
- Multi-calibre family of weapons with logistics and upgrading advantages
- Translucent pistol grip for easy round check
- Low recoil and good controllability
- Ergonomically designed
- Cost effective

Translucent pistol grip for easy round check

Picatinny rails for mounting of sights and accessories

Retractable stock for flexible deployment

CPW with Silencer

Compact Personal Weapon

ST Kinetics Compact Personal Weapon (CPW) is a cost effective, lightweight and compact weapon with low recoil. The 9mm calibre version weighs only 1.7kg but with performances and features comparable to or better than larger and heavier weapons of the same calibre.

Multi-Calibre Family of Weapons

Besides the standard 9mm version, other ammunition calibres can be accommodated due to the CPW's modular construction. By changing its barrel and magazine groups, the CPW can be configured to other calibres, eg. 4.6mm, 5.7mm and others.

Enhanced Safety Features

The CPW incorporates a standard safety mode selector "Trigger Drop Safety and Firing Pin Safety Block to ensure it is safe for use or carriage".

Low Recoil

A unique cam recoil mitigation mechanism (delayed blow back operation) reduces recoil significantly to allow accurate and controlled firing.

Compact Size and Low Weight

The CPW is made from high strength engineering plastic materials and aluminum, making it extremely lightweight. Its compact size facilitates ease of use as it can be conveniently carried or holstered and handled like a pistol, making it relevant to law enforcement and security forces.

Mounting System

The CPW is installed with 2 sets of Picatinny Rails conforming to MIL-STD-1913 for the mounting of different sights and accessories such as fore grips, torch light, laser aiming device etc. to suit different operational scenarios.

Retractable Stock

The CPW has a sturdy built-in retractable stock that provides good support during aimed fire. When retracted, it is well hidden and compact enough to be holstered without obstructing or causing discomfort to the user. The retractable buttstock enables the weapon to be used as a pistol in the one or two handed firing posture or a sub-machine gun in the two handed firing posture.

Technical Specifications

Calibre	9 mm (options for other calibres)	Maximum Effective Range	100 m with 1 in 250 mm Rifling Barrel
Length	393 mm (597 mm extended)	Standard Accessories	■ Cleaning Kit ■ Sling ■ 30 Round Plastic Magazine
Barrel Length	180 mm (7")	Optional Accessories	■ Reflex Sight ■ Mechanical Sight module
Mounting System	2 sets of Picatinny Rails		■ Fore grip ■ LAD ■ Silencer ■ Holster
Weight	Weapon without accessories		■ Folding Stock ■ Torch Light
	30 Round Plastic Magazine		
Operating Features	Firing Modes		
	Method of Operation		
	Rate of Fire
