

DiskCrypt

Secure Portable Storage

DiskCrypt M20

DiskCrypt M200

Secure Data on the Move

In today's rapidly evolving digital landscape, securing sensitive information while maintaining workforce mobility is paramount. DiskCrypt offers enterprise grade protection through advanced hardware-based encryption and smart-card two-factor authentication. With cross platform compatibility and no need for additional software, these portable, certified devices simplify data management while ensuring robust security for the mobile workforce.

As organisations increasingly rely on mobile devices and remote work, the risk of data breaches, theft, and loss of unprotected portable storage grows. Without strong encryption and access controls, enterprises expose themselves to significant operational, reputational, and financial risks.

The rise of mobile workforces and remote operations amplifies the attack surface, making robust security measures critical. DiskCrypt addresses this challenge, safeguarding valuable data from theft, loss, and unauthorised access, ensuring organisations maintain control over their most sensitive assets, no matter where they go.

About DiskCrypt

DiskCrypt provide businesses with high assurance, portable encrypted storage designed for today's mobile and remote workforces. With hardware-based encryption and smart-card two-factor authentication, these devices ensure sensitive data is securely stored and accessible without compromising performance. DiskCrypt enables organisations to protect sensitive data at rest, enhance productivity, and reduce the risk of unauthorised access resulting from device loss or theft.

Advanced hardware encryption and smart-card 2FA for secure, tamper resistant data protection.

Seamless cross platform compatibility with Windows, Linux, and macOS, no software installation needed.

Protects against data loss, theft, and unauthorised access, ensuring data integrity and reducing risks.

Deployment Architecture

Redefining Data Mobility

Safeguard Critical Data

DiskCrypt ensures robust protection for sensitive data, whether in transit or at rest, across all sectors. Ideal for mobile professionals, these devices provide encrypted storage without compromising performance.

Seamless Integration & Flexibility

Deploy across diverse environments, supporting hybrid IT and multi operating system infrastructures, providing adaptable, robust security for various operational needs.

Enhance Compliance & Risk Management

Achieve seamless compliance with industry standards such as ensuring data integrity while mitigating the risk of non-compliance and regulatory breaches.

Streamline IT Operations & Maintenance

Simplify deployment and management with no need for drivers or back the software installations, reducing IT complexity and operational overhead, allowing teams to focus on strategic priorities.

Maximise Workforce Productivity & Mobility

Enable fast, encrypted access to data without software dependencies, empowering professionals to work securely from any location, enhancing operational flexibility without compromising security.

Specifications

- High capacity storage up to 8TB.
- Rugged, portable, and lightweight. M20: < 90g. M200: < 330g.
- Provides fast read and write speeds for efficient data access and transfer.
