

AGIL  Secure

INTEGRATED SECURITY MANAGEMENT SYSTEM

 ST Engineering

HARNESS THE POWER OF UNIFIED SECURITY

Today's security landscape is increasingly complex and the ever-demanding security challenges faced by various diverse industries cannot be simply addressed with a pieced-together security infrastructure.

Physical security systems are increasingly overlooked and becoming less effective at detecting and responding to threats in the face of increasing security threats, malicious actors, physical breaches as well as internal and external risks due to evolving workplace practices. With threats attacking weaknesses and vulnerabilities in aging physical security systems, it exposes the weaknesses of disconnected security solutions against modern, sophisticated threats.

A disconnected security framework is not just difficult to manage. The lack of visibility and fragmented oversight across poorly integrated systems limits insights and compromises security across all environments.

It has never been more important to centralise and unify the security of network environments, users, and devices. Bringing together teams and technology together with a unified approach to security, your organisation can strengthen your security strategy, be more operationally, efficient, make better decisions, and respond to situations and threats with greater confidence.

EMPOWERING UNIFIED SECURITY RESPONSE

AGIL® Secure is a fully integrated security management solution that provides a centralised platform for real-time monitoring, control, and seamless management of all security and safety events across multiple locations and systems, to empower unified security response to potential threats and risks.

Enhanced Security Awareness

With real-time visibility into security operations, organisations can also identify and respond to potential threats more quickly, lowering the risk of security breaches and ensuring the safety of assets and personnel.

AGIL® Secure actively stores and analyses security-related data to provide valuable insights into security trends. With a comprehensive view of the security landscape, organisations can make data-driven security decisions.

Complete Security Control

Bringing together various security systems, devices, and tools, AGIL® Secure enables organisations to effectively manage and monitor the entire security environment with complete security control from a single unified platform.

From system configuration and management, to live monitoring and reporting, operators can achieve a comprehensive view into events happening across premises and systems, ensuring greater awareness and operational insights.

Integrated Operations

AGIL® Secure delivers a centralised view of operations, allowing organisations to optimise resources for real savings in deployment, maintenance, training, and day-to-day management of security.

Operators can enjoy a consistent user experience and collaborate more effectively with different security teams and departments. A unified platform also means that onboarding new operators is easier, with only one platform to work on.

REDEFINING SECURITY MANAGEMENT FOR

Business Organisations

- ▶ Higher Security Awareness & Posture
- ▶ Enhanced Operational Visibility & Efficiency

Security Operators

- ▶ Effective Deployment & Maintenance
- ▶ Simplify User Experience & Training

A COMPREHENSIVE APPROACH TO UNIFIED SECURITY

Unlike integrated systems that simply connect a variety of security applications to share data, AGIL® Secure delivers a truly unified operator and user experience through its powerful command and control platform.

From a single monitoring application at their workstation or in a security operations control room, AGIL® Secure enables organisations to achieve comprehensive visibility and management of all security operations and functions, ranging from personnel access, alarm reporting and alert, graphical information display, to situational and event control.

With data from across all security operations on a single screen, organisations can also gain real-time access to critical information for greater awareness and operational insights, improving decision-making and reaction time, and augmenting the safety of the people and environment.

YOUR INTEGRATED COMMAND & CONTROL CENTRE

AI Platform Event Management

Receive event updates and insights without the clutter from event notifications.

Incident Management

Manage incidents effectively with automated responses to security events and detailed operating procedures.

Video Management

Enhance situational awareness with live camera video. stream/playback.

Professional User Management

Create custom roles and permissions with different levels of access.

Mobile Visitor Management

Simplify hosting with remote management.

Visual Workflow Builder

Systemise best practices with rules-based engine and no-code workflow design.

Smart Analytics

Access real-time analytics capabilities to identify trends and make data-driven decisions.

Comprehensive Reporting

Track and review operations easily for audit trail and regulatory compliance management.

CONTROL AND MANAGE EVERY SECURITY POINT

Designed to help organisations manage their security incidents more efficiently and effectively, AGIL® Secure powerfully combines the functionalities of different security systems, including access control, surveillance systems, video analytics, intrusion detection and other physical security system sensor elements onto a single interface.

COMPLEX PROCESSES MADE SIMPLE

Unified security not only provides greater awareness and control, but it also removes the disadvantages of traditional security systems, such as limited connectivity between applications, compatibility issues, and complicated maintenance.

With AGIL® Secure, you can proactively manage all aspects of your security operations from anywhere, on any device.

User Interface

FLEXIBLE AND SCALABLE

- ▶ Unlimited scalability from one to hundreds of systems and applications.
- ▶ Allows integration with any state of art sensor in the market.
- ▶ Web API-enabled for easy extended integrations with other smart systems.
- ▶ Cloud native adaptability across public, private and hybrid cloud infrastructure.
- ▶ Supports integration via API, SDK, MQTT, AMQP, Web API, OPC, BACNet
- ▶ Easily expand control of multiple sites with multi-tenancy and multi-site federated management
- ▶ Built-in integration for AGIL® Secure suite of security devices

EVOLVE YOUR ORGANISATION'S SECURITY OPERATIONS

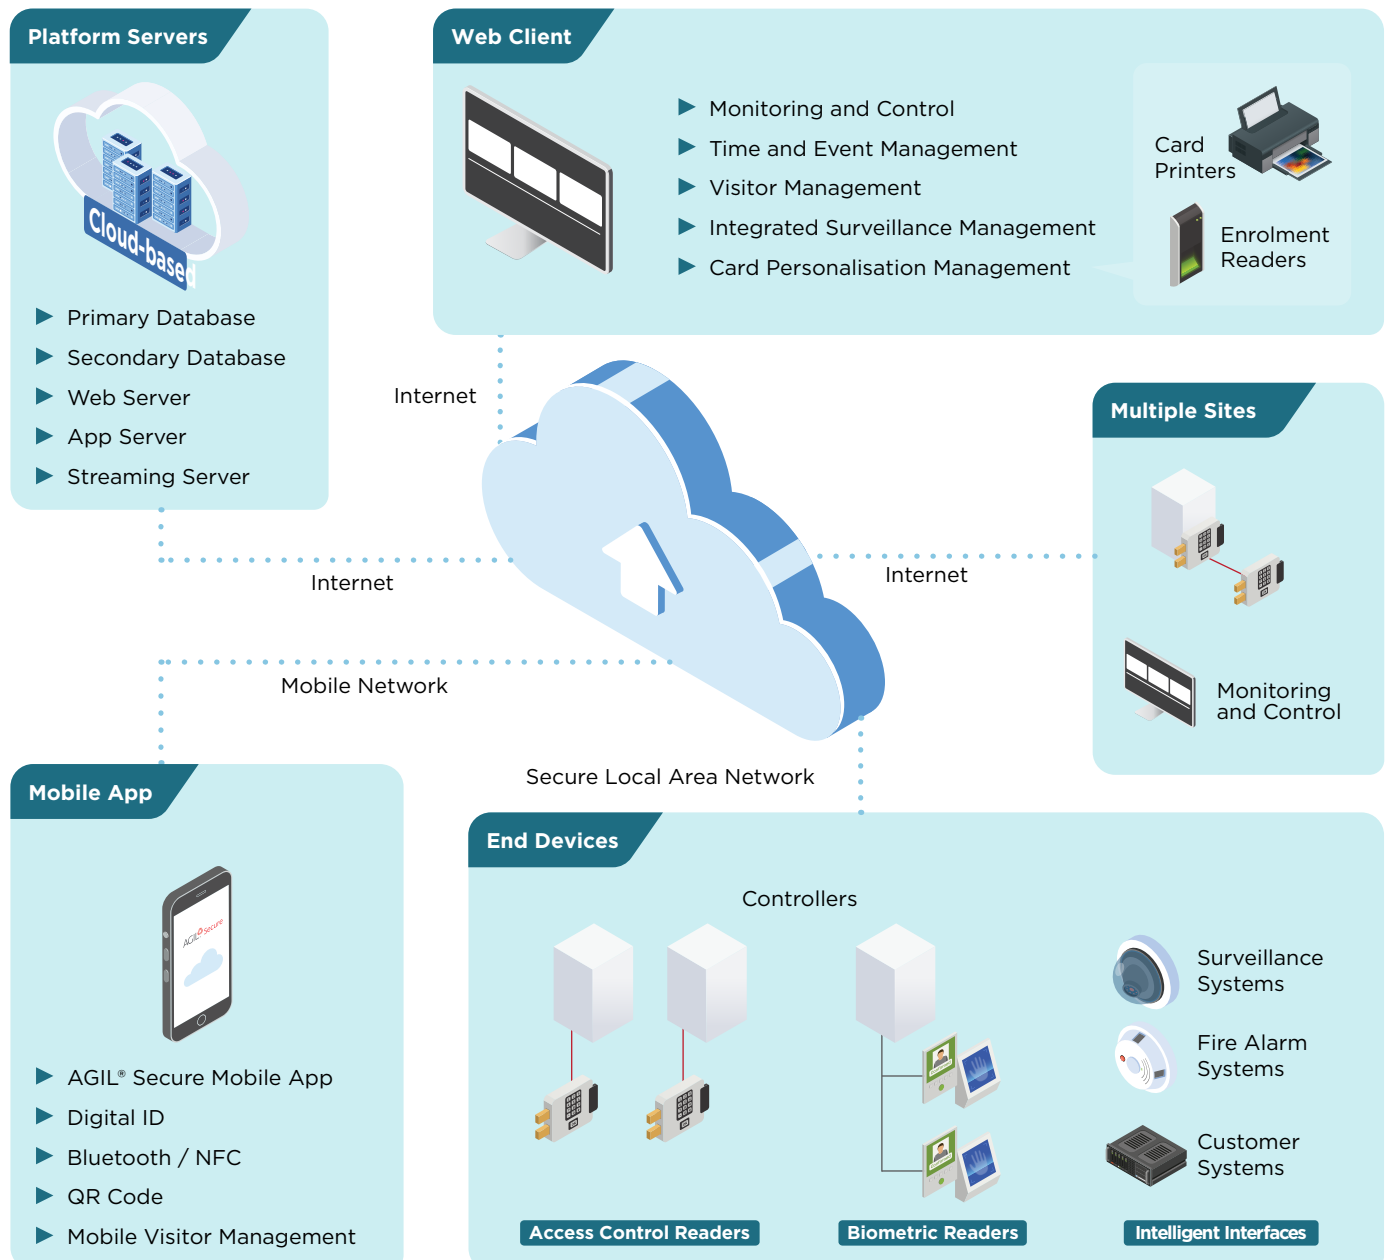

Cloud solutions are business-essential these days.

As traditional security systems age, there is a need to continuously replace or update the systems to decrease risk, including patching, cybersecurity enhancements, and more. These updates require downtime, personnel, and usually monetary cost to implement the updates.

With AGIL® Secure, these security updates can occur automatically through cloud with little to no downtime, allowing your organisation to operate at maximum efficiency with an up-to-date system.

Whether it is to replace aging security infrastructure or securing a new installation, AGIL® Secure is the ideal platform to help you extend the capabilities of on-premises installation and reduce IT infrastructure costs.

- ✓ **Modernise aging systems without downtime and interruptions to security operations.**
- ✓ **Future-proof operations to enable continued integration with existing security systems.**

AGIL® SECURE SUITE OF SMART SECURITY SOLUTIONS

ST Engineering designs and develops a comprehensive range of integrated security and automation solutions that has been helping customers remain agile and proactively adapt to dynamic environments which can potentially pose threats to their assets or premises.

Discover how our AGIL® Secure suite of smart security solutions can empower you to think quick, act fast and respond intelligently.

WE ARE HERE TO ACCELERATE SAFER CITIES

As our cities grow more complex, interconnected and increasingly digitised, the potential risks and threats also become more sophisticated. How we safeguard access to our borders, critical infrastructure and city spaces is critical to ensuring the security of smart cities of today and the future.

Our suite of integrated security solutions is built on first-class security standards and protocol to empower secured access, effective surveillance and threat detection.

A leader in smart city security with a track record of deployments in 150 cities and a trusted partner of governments around the world, we're here to accelerate smart city transformation for a safer future.

>150 CITIES

secured in mission-critical activities for governments and enterprises.

>35 YEARS

of experience in government-grade access control technologies.

>10,000

physical access points secured for more than a million people.

>250 MILLION

frictionless interactions secured annually.

PROTECTING THE SPACES WHERE PEOPLE LIVE, WORK, LEARN AND TRAVEL

- ▶ Commercial & Industrial Sites
- ▶ Key Infrastructures
- ▶ School and Campuses
- ▶ Air, Land and Sea Port of Entry
