SELECTED PORTFOLIO COMPANIES

Beyond funding, our portfolio companies are able to access the Group's resources, technical and engineering capabilities and customer networks.

Israel-based hiSky is the leader of satellite agile IoT networks, enabling businesses, people, and machines the freedom to connect from any device, anywhere, always. hiSky provides a reliable and affordable satellite IoT terminal and MSS network with an easy-to-use cloud-based management platform that includes monitoring, alerting, and billing capabilities.

Arris Composites created a new manufacturing category called Additive Molding by pioneering the development of patented software, materials, and high-volume production methods that prioritize specific stiffness and strength. New levels of product performance are now possible with this first-of-its-kind advanced manufacturing platform, enabling continuous fiber-reinforced thermoplastic composite structures that are lighter and more sustainable.

EdgeQ develops open and programmable system-on-a-chip for next-generation 5G edge networks. The company is the first in the world to offer a software-defined platform that integrates 4G, 5G and AI all on one chip. This allows it to be easily scalable and field upgradeable, thus making it very suitable for edge devices. The company serves the telecom, cloud and private 5G markets, enabling enterprises to harness private networking for disruptive applications, intelligent services, and new business models.

Skyports designs, builds and operates take-off and landing infrastructure for air taxis, and partners with world-class (eVTOL) passenger and cargo vehicle manufacturers to enable safe, sustainable, and efficient flight operations. Skyports is also a drone services provider, connecting people, businesses, and communities to vital supplies and services, such as healthcare, maritime, logistics, and e-commerce.

Israel-based Radiflow is a leading provider of cybersecurity solutions (intrusion detection and prevention solutions) for critical infrastructure networks (i.e. SCADA), such as power utilities, oil & gas, water and others. SCADA networks often extend across multiple remote sites, allowing automation devices to be controlled from the control centre.

Azendian Solutions is a leading provider of information management and advanced analytics implementation, development and consultancy solutions and services. Covering multiple industries and domains, Azendian specialises in anything data. Their expertise is around managing and using data to help their clients achieve or exceed their objectives by bolstering their experience with facts and data.
