Supporting longstanding customers with CFM56-7B engine maintenance

We recently secured heavy shop contracts from two established airlines in Asia, and will carry out maintenance for their CFM56-7B engines at our engine MRO facilities in Singapore and Xiamen, China. As we support our customers with CFM56 engine needs, we are also gearing up to meet future demand by expanding into LEAP 1-A and 1-B engine capabilities.

Enhancing our presence in China: Airframe MRO JV with SF Airlines

ST Engineering has entered a joint venture with SF Airlines to set up a commercial airframe MRO facility in Ezhou Huahu Airport, Hubei, China. Subject to regulatory approval, the strategic collaboration is well poised to capitalise on rising MRO demand across our key markets in China and the Asia Pacific region.

Annual Safety Series: Reinforcing our commitment to keeping aircraft flying safely

by Eugene Tan (Head, Policy & Accident Prevention, CA Corp Quality and Safety)

As a leading global third-party MRO solutions provider, we recognise our pivotal role in setting and upholding the highest safety standards for our total aviation solutions. Our annual Safety Series event emphasises such unwavering commitment to the importance of safety in all our operations.

The 23rd edition of this event featured the evergreen theme "We Work Safely and Keep Aircraft Flying Safely". Over a period of four months, our Commercial and Defence Aerospace employees engaged in several activities such as online quizzes, an emergency evacuation exercise and the mass Foreign Object Debris (FOD) walk, which is organised to remove any debris in the work area that could jeopardise aircraft safety if left unnoticed and untouched.

Our first post-COVID mass evacuation exercise.

A key highlight of the series was our Global Safety Webinar, which brought together industry keynote speakers from Qantas, Japan Airlines, Shell, and the U.S. Federal Aviation Administration to collectively share and recognise one another's steadfast efforts in maintaining safety and quality standards. Several hundred colleagues from our Aerospace businesses in Singapore, United States, China, and Europe participated in the webinar, with 100 participants present in person at Temasek Club in Singapore.

We held our Global Safety Webinar with several hundred colleagues participating.

Every year, the Safety Series celebrates quality excellence and safety-driven innovation by presenting awards to employees with significant contributions to enhancing safety at the workplace. The event culminated with six employees receiving Good Show Awards for their outstanding acts in maintaining aviation workplace safety; three Environmental Health and Safety Innovation awards were also presented for contributions in the field.

ST Engineering's Senior Management leading the way in our activities to reaffirm our commitment to aviation safety.

With the Safety Series receiving full buy-in across all levels of our Aerospace business, customers and aviation authorities can rest assured that we will continue to pursue the highest standards of safety and quality, ensuring customer value and service excellence in all our products and services.
